FOR IMMEDIATE RELEASE

First Non-Technical Book Aids the Casual Computer User on Windows® 7

SOUTH ORANGE, NJ – September 6, 2009 – *Windows 7® Dawn of a New Day*, a book aimed at navigating through the new Microsoft Windows 7® operating system from a casual computer user perspective, was launched at online retail sites worldwide today. It's the first non-technical book available to the public that references the differences between prior operating systems. It is also the first Microsoft® independent book available for the casual computer user at major online retailers.

Written by Melanie Gass, President of CenterPoint Solution, this book is designed as a step-by-step reference manual for the casual computer user. It reviews the new look of Windows 7® and captures new features of this system in comparison to Microsoft Windows XP®. The intent of the reference guide is to help the typical computer user find features easily in this latest edition of Microsoft Windows®, and also learn the options that were always available in previous versions. Gass states, "My experience as a trainer for thousands worldwide has taught me that most people over the years were never given the luxury of having training for their computer. As a result, they aren't using the programs to the best of its ability. This manual gives them that luxury of having a trainer at their side to answer their questions in a quick, easy to use format. It finally takes the fear away of what a function does if they click on it."

Microsoft is scheduled to debut Windows 7® October 22, 2009. Microsoft® has prepared for this launch by offering two preliminary tests to its partners and to the public throughout this year.
